

We the undersigned oppose the proposal of the wind turbine project on Reynolds Road in the Town of Glen, NY

Please help our effort to keep this wind turbine out of the town of the Town of Glen to prevent the destruction of our peaceful way of life just so big business and property owners can pocket money. The proposed 640ft+ tall, 4.3 megawatt wind turbine could cause severe disturbances to the people and wildlife living within close radius, not to mention the massive eyesore that will be visible from multiple areas of our community including other nearby towns. For residents living near this wind turbine, many issues can arise such as having to listen to noise from the turbine, shadow flicker and infrasounds. Health issues associated with living close to a wind turbine include sleep disturbances, headaches, ear pressure, dizziness and more. Having a wind turbine in your town can also deplete your property value and severely hurt the value of property and homes close to them. The turbine also can create big disturbances to wildlife habitat in the surrounding areas, animals will not want to live around a large, noisy wind turbine and birds such as hawks, crows, migrational birds and bald eagles, (a protected species spotted living near the area where the turbine will be placed) could be endangered by the spinning blades which can basically knock them out of the air. Also in order to transport the large parts of the turbine, roads may need to be severely modified or potentially new roads may need to be built and large traffic hold ups could last for long periods of time. There also is a possibility that the wind turbine could experience catastrophic failures such as collapsing, catching fire or even the blades exploding due to the wind turbine spinning too fast and the blades coming off and tearing apart throwing debris hundreds of feet in all directions. These issues show that a wind turbine in our community will not only create a disturbance to people living near it but also to the people of the entire community, and we may not even see any of the benefits from it. If you don't care about your community and your neighbors than this petition is not for you but if you don't want a big wind turbine to be put in a field near you that will severely disturb residents, wildlife, transportation and even your property value please sign this petition to fight against this proposed wind turbine in our community.
