

Recommendations from Dr. Mark Caffrey, Au.D. from 1/20/22 Meeting:

[Adverse health effects of industrial wind turbines \(nih.gov\)](#)

Industrial wind turbines can harm human health if sited too close to residents. Harm can be avoided if IWTs are situated at an appropriate distance from humans.

[Health Effect of Wind Turbines | Science-Based Medicine \(sciencebasedmedicine.org\)](#)

The existing evidence indicates that concerns over a wind turbine health syndrome are only semi-plausible. Further, the evidence does not support any objective measure of negative health effects (like blood pressure), but does show an effect on subjective symptoms.

[Wind turbines and low frequency noise: Implications for human health | Wind Energy Impacts and Issues \(wind-watch.org\)](#)

Recommendations from the public from 1/20/22 Meeting:
