To: Planning board of the town of Glen NY in Montgomery County

This letter is being sent to share my concerns and out right disapproval of the Wind Turbine proposed for 411 Reynolds Rd in the town of Glen N.Y...

m

*This wind turbine is an INDUSTRIAL SIZED WIND TURBINE NOT A COMMUNITY SIZED WIND TURBINE!!*

*In reviewing many of the articles and proposals submitted by Borrego (known for solar not wind turbines) we have found many discrepancies and lack of detail in proposal ,detailed drawing and specifications of the wind turbine.*

*This concerns me with this just being the planning stages and all the inaccuracies already. What will the detrimental inaccuracies be to the product of at 640' structure being installed?*

*I am shocked with the fact we are even considering this oversized 4.3-Megawatt Wind turbine to be installed so close to private property ,neighboring families and looming over our beautiful hamlet of Glen. Why here? The life styles that we have work generations to achieve will be stolen from us. There are so many other places on this planet where the habitat of both human and animal will not be disturbed. Why should my family and neighbors take on the burden of all the noise disturbance ,obstruction of view and cost in taxes produced by this wind turbine?*

*Those of us who live with in 3000 ft of this monstrosity will forever have the disturbance of Noise, infer soundwaves, pulsating vibrations, sleep deprivation, heart palpitations, Flicker effect, shadowing, disturbance in our Cell Services, radio, Television, Satellite and internet services. Why should we take on this burden? It is in violation of my right of quiet enjoyment of property that we pay our share of taxes on.( unlike the 15 years of tax waver on a 5-million-dollar Turbine project ) If they paid taxes on this, it would be approximately \$100,00.00 for just county taxes a year, school taxes would be about the same.*

*How will neighboring land owners be compensated for their FOREVER DISTURBANCE? No one wants to hear a sound equivalent to a dishwasher ( quoted from literature and employee of Borrego) in their bed room, living room, dining room, bathroom and while we are making our*

meals in the kitchen. Every day!! Nonstop!! Some residents the sound will be even louder. Property values of homes within these unacceptable noises and other disruptions will plummet. What are the consequences for the sound disturbance that will be louder than they specked?

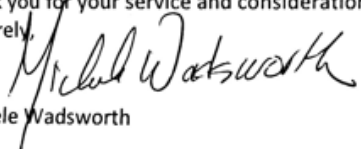

We are a farming community, even more so now with our Amish friends, with this proposed wind Turbine they potentially have the right to tell the existing land owners that they cannot build buildings such as a silo, build investment development on our property, plant trees, Hunt, and may have the right to our private property for Easements and Right -of-way, to dig under ground lines and trenches through our property and run 3 PHz power lines above and below our property. We must read between the lines!!

What are the lines of no tress passing boundaries considering the proximity to privet property? I ask this question because of research I have done. I have seen private property labeled as a no trespassing zone spanning up to 192 acres around wind turbine. This would be unacceptable.

\*\*I am adamantly against this wind turbine hovering over the land that my family, friends and neighbors enjoy for peace and tranquilly, our rights as landowners.

In order to keep this letter shot I will stop here for now, however my list of reasons why we should not have this Megawatt wind turbine in our town goes on.

Thank you for your service and consideration of my declaration and those of my neighbors.  
Sincerely,

  
Michele Wadsworth
